Domain Setting

Setting up DNS for Google Apps usage

Setting up DNS for Google Apps usage

1. Go to https://register.dotarai.com and login to your account. Select the **Domain (1.1)** tab to bring up a list of your domains, along with the available options to view their details. Click on the **View (1.2)** button next to the domain name that you wish to edit to bring up the domain's information.

2. Check to see if your Name Servers are set to **ns1.dotarai.com and ns2.dotarai.com.** If so, you may proceed to Step 4. If not, you may adjust your name servers in Step 3. If you are using the third party Name Server provider, you must contact your provider to setup the DNS or zone file for Google Apps usage.

3. In order to set your Name Servers as **ns1.dotarai.com and ns2.dotarai.com,** you may do so by clicking the **Name Server (3.1)** menu and type in these Name Server addresses into the **Name Server (3.2)** fields. After that, press **save (3.3)**.

4. Click on the **'zone file' (4.1)** menu. Then, fill in the CNAME, A, or MX values that you would like to record. When you have filled up each field, click on **add (4.2)**, and press **save (4.3)** when you have completed adding the values.

5. Recommended Google Apps settings

** These settings are for setting up CNAME and MX values only. When adding values that contains domain names, it is necessary to add a period "." at the end. **

MX 1 ASPMX.L.GOOGLE.COM.

MX 5 ALT1.ASPMX.L.GOOGLE.COM.

MX 5 ALT2.ASPMX.L.GOOGLE.COM.

MX 10 ASPMX2.GOOGLEMAIL.COM.

MX 10 ASPMX3.GOOGLEMAIL.COM.

MX 10 ASPMX4.GOOGLEMAIL.COM.

MX 10 ASPMX5.GOOGLEMAIL.COM.

@ TXT "google-site-verification=XXXXXXXXX_XXXXXXXXXXXXXXXXX"

googlefffffffffXXXXXXX CNAME google.com.

start CNAME ghs.google.com.

mail CNAME ghs.google.com.

calender CNAME ghs.google.com.

www CNAME ghs.google.com.

docs CNAME ghs.google.com.

Your google verification code is obtained when registering for Google Apps. You may choose to confirm your domain by either adding a **CNAME** or **TXT Record** (choose either one).

Domain Setting

** The zone file will be updated in 15 minutes and the update may need up to 24 hours to propagate to your resolver. **
