## How to Forward and Redirect Your Domain Name

### How to Forward and Redirect Your Domain Name

1. Go to <https://register.dotarai.com> and login to your account. Select the **Domain (1.1)** tab to bring up a list of your domains, along with the available options to view their details. Click on the **View (1.2)** button next to the domain name that you wish to edit to bring up the domain's information.

The screenshot shows the DotArai user interface. At the top, there is a navigation bar with tabs: Home, Profile, Domain (1.1), Web Hosting, and Shopping Cart. On the left sidebar, the 'My Domains' link is circled in red (1.2). The main content area is titled 'My Domains' and contains a search bar with fields for Name (www.), Expiry Date From, and To, and a Search button. Below the search bar, it states 'Number of registered domain: 1'. A table displays the domain information:

#	Domain Name ▲	Expiry Date	
1	dotaraidemo.com	01/04/2019	<b>View</b> (1.3) <b>Renew</b>

At the bottom of the table, there are pagination controls: Page 1 of 1, Page Size 10, and Total 1 Record.

2. Check to see if your Name Servers are set to **ns1.dotarai.com** and **ns2.dotarai.com**. If so, you may proceed further otherwise you need to contact your Name Server provider to do the Forward/Redirect.

The screenshot shows the 'Name Server' configuration page. It has a title 'Name Server:' and two input fields. The first field contains 'ns1.dotarai.com' and the second field contains 'ns2.dotarai.com'.

3. Click on **Options**, as shown in the picture.

4. In the dropdown menu below **(4.1 as shown in the picture)**, select either URL Forwarding or URL Redirect, where

## Domain Setting

**\*\*\*Forwarding** means that the URL that is typed into your browser (and the URL that is shown) would be your domain's but the contents displayed will be that of the target URL.

**\*\*\*Redirect** means that the URL that you type will be changed to the target URL (meaning you will be taken to that website), as well as the contents displayed, will be that of the target URL.

After that, enter the URL that you would like to point to in the empty field **(4.2)** next to the drop-down menu, as shown in the picture, then press **save (4.3)**.

**\*\*When you have completed these steps, your website should be forwarded or redirected in 1-2 hours.**

**Note: If your target URL is either Facebook or Google Site, you must use the only URL Redirect as URL Forwarding is not accepted for those sites.**
