How to Forward and Redirect Your Domain Name

How to Forward and Redirect Your Domain Name

1. Go to <https://register.dotarai.com> and login to your account. Select the **Domain (1.1)** tab to bring up a list of your domains, along with the available options to view their details. Click on the **View (1.2)** button next to the domain name that you wish to edit to bring up the domain's information.

The screenshot shows the DotArai website interface. At the top, there is a navigation bar with tabs: Home, Profile, Domain (1.1), Web Hosting, and Shopping Cart. The 'Domain' tab is selected. Below the navigation bar, the main heading is 'My Domains'. On the left side, there is a sidebar with a 'www My Domains' button (1.2) and a list of options: Register Domains, Register .ไทย, Privacy Protection, and Renew Domains. The main content area shows a search bar with fields for Name (www.), Expiry Date From, and To, and a Search button. Below the search bar, it says 'Number of registered domain: 1'. A table lists the domains with columns: #, Domain Name, and Expiry Date. The first row shows domain 'dotaraidemo.com' with expiry date '01/04/2019'. Next to the domain name is a 'View' button (1.3) and a 'Renew' button. At the bottom, there are pagination controls showing 'Page 1 of 1' and 'Page Size 10'.

#	Domain Name ▲	Expiry Date
1	dotaraidemo.com	01/04/2019

2. Check to see if your Name Servers are set to **ns1.dotarai.com** and **ns2.dotarai.com**. If so, you may proceed further otherwise you need to contact your Name Server provider to do the Forward/Redirect.

The screenshot shows the 'Name Server' settings page. It has a heading 'Name Server:' and two input fields. The first field contains 'ns1.dotarai.com' and the second field contains 'ns2.dotarai.com'.

3. Click on **Options**, as shown in the picture.

Domain Setting

The screenshot shows the 'Domain Setting' interface with the 'Options' tab selected. The 'Forward & Redirect' section has a dropdown menu set to 'Disabled'. Below it, the 'Sub Domain' section shows a text input field with '.dotarai.com' and a 'target:' field. An 'Add' button is next to the target field. A table below the 'Add' button has columns 'subDomain', 'target', and '#', with a row containing 'No data'. A 'Save' button is at the bottom.

4. In the dropdown menu below **(4.1 as shown in the picture)**, select either URL Forwarding or URL Redirect, where

*****Forwarding** means that the URL that is typed into your browser (and the URL that is shown) would be your domain's but the contents displayed will be that of the target URL.

*****Redirect** means that the URL that you type will be changed to the target URL (meaning you will be taken to that website), as well as the contents displayed, will be that of the target URL.

The screenshot shows the 'Domain Setting' interface with the 'Options' tab selected. The 'Forward & Redirect' section has a dropdown menu set to 'Redirect' (labeled 4.1). The text input field next to it contains 'www.dotarai.com' (labeled 4.2). Below it, the 'Sub Domain' section shows a text input field with '.dotarai.com' and a 'target:' field. An 'Add' button is next to the target field. A table below the 'Add' button has columns 'subDomain', 'target', and '#', with a row containing 'No data'. A 'Save' button is at the bottom (labeled 4.3).

After that, enter the URL that you would like to point to in the empty field **(4.2)** next to the drop-
Page 2 / 3

Domain Setting

down menu, as shown in the picture, then press **save (4.3)**.

****When you have completed these steps, your website should be forwarded or redirected in 1-2 hours.**

Note: If your target URL is either Facebook or Google Site, you must use the only URL Redirect as URL Forwarding is not accepted for those sites.
